# IRONSAFE REPORTDB

## TRANSFORM YOUR REPORT DATA IN MINUTES

IronSafe from Trellance extracts and transforms ANY report, ANY format from ANY source system into usable database structures, automatically allowing users to quickly analyze and visualize their report data.

Report ID	Date	Metric 1	Metric 2	Metric 3
XXXXXX1	2018-01-01	100	200	300
XXXXXX2	2018-01-02	105	210	310
XXXXXX3	2018-01-03	110	220	320
XXXXXX4	2018-01-04	115	230	330
XXXXXX5	2018-01-05	120	240	340

### EXTRACT YOUR DATA

IronSafe automatically extracts report content into database tables that you can then extract to CSV or use to populate your own or third party analytical tools:

- Automated template authoring
- Any report format, including PDF
- Any card processor report format
- Any core system report format
- Output to CSV, databases or data warehouses
- Extract data from different reports and databases into one database
- Multiple extraction templates can be created and saved per report

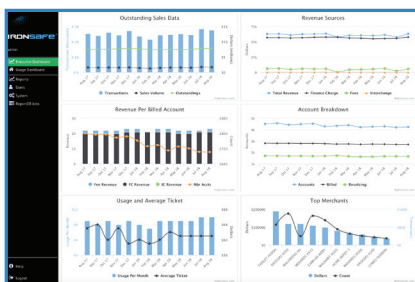

Card ID	Balance	Metric 1	Metric 2	Metric 3
XXXXXX1	100.00	100	200	300
XXXXXX2	150.00	150	300	450
XXXXXX3	200.00	200	400	600
XXXXXX4	250.00	250	500	750
XXXXXX5	300.00	300	600	900

### ANALYZE YOUR DATA

When your report content is in database tables, research is fast:

- Trending insights from data
- Filter and search transaction data
- Gain insights on card portfolios
- Purchase trends for marketing promotions
- Fraud and delinquencies analysis
- Card portfolio profitability
- Web-based analyzer, pivot table or spreadsheet view available in ReportDB

### VISUALIZE YOUR DATA

Know the story your report data has to tell:

- Graph key performance measures
- Instant report data dashboard updates upon automated report ingestion
- Graph program volume, cash balance, income
- Build custom graphs and charts
- Dashboard publishing for executive view

# IRONSAFE™ REPORTDB

## BUSINESS CHALLENGE

The data you need to answer your most vital business questions lies siloed across numerous static reports. Gathering this data from those reports can be challenging, time consuming, and too, often requires special expertise to draw it from hard-to-decipher formats. IronSafe ReportDB is an easy, automated way for you to secure, transform, and put to work all of your report data.

## SEARCH YOUR DATA

You will be able to search for specific report data across hundreds of generations of report instances to quickly find an account number, dollar value, or other critical search criteria in seconds.

## REPORTDB API

Get creative! Bring Report Data from **multiple different reports** into one database schema or CSV for use in other applications, automatically eliminating laborious, manual table building.

## SECURE YOUR DATA

**Keep it safe, keep it secret.** Your reports contain vital, confidential information. IronSafe stores your historical reports in a single, secure report warehouse. So, you can secure all your reports under one lock and key, even down to the page level when needed.

## REPORT REPOSITORY

Securely store your original reports. Whether reports are produced in-house by your banking core system reports, card processor reports, network reports, or other sources, IronSafe ReportDB can store them, extract their content, and present their content in dashboard analytics. The IronSafe Repository feature allows you to automatically store and delete historical generations of any report based on your retention policies.

Let us help you transform your report data.

## EASY SETUP

Data science is complex. IronSafe ReportDB becomes your in-house rocket-scientist, so you don't need to hire one. Our visual editor reads your reports right along with you, rapidly assisting you in setting up the data tables that you need from your reports. Set it up once, then see the story your report data tells you automatically, every day.

## ABOUT IRONSAFE

IronSafe from Trellance has developed a state of the art, cloud-based secure software solution called ReportDB Data Extraction and Analytics that can extract data from any card processor's report structures – banking core system reports, card processor reports, or other reports – into denormalized database structures for download to CSV, analytical viewing, key performance dashboards, fraud analysis, or to populate your data warehouse schema to use against your own analytical tools. Other report data extraction technology tools on the market today are extremely laborious and require very technical skills to set up extraction templates of complex reports. In addition, these extraction steps have to happen each and every time a new report is generated to get the data out of those reports for data analytic purposes. IronSafe automated extraction technology authoring allows users to define templates in minutes and once a report is set up all your future report data is automatically extracted and stored into ReportDB saving you time and money. This proprietary technology is being used by over 3500 financial institutions. IronSafe ReportDB has a seamless implementation and provides 100% encryption of report generations within the solution. Subscription-based licensing, with a Risk-Free trial period, together with Trellance's professional data-driven consulting services, makes Ironsafe the optimum investment to help your entire organization work smarter and faster.
